

New Aton Connect Host Integration Toolkit Gives Web and Portal Developers Quick Access to Enterprise Data in Visual Studio

Summary: Easy to Use Components, Sample Projects & Knowledgeable Support Create a Winning Web Software Toolkit for .NET Developers Needing Access to Data on Corporate Mainframe Systems

Los Altos Hills, CA - June 15, 2007 - Aton International, Inc., Specialists in Mobile Device Applications, Enterprise Data Access and Embedded Systems, today announced the release of Aton Connect Host Integration Toolkit, that helps web and business portal developers access enterprise data residing on mainframes and deliver it to employees and customers via ASP.NET pages using familiar Microsoft tools and programming languages.

The Toolkit includes Aton Connect software components, reusable sample code and documentation that work with Visual Studio 2005 and ASP .NET 2.0 to access corporate data from IBM System z enterprise servers for use in an unlimited number of business cases. Traditional host access products charge session or run-time fees that can substantially increase the cost of implementing a solution. Aton International's special introductory pricing of an annual flat-fee license of \$2400 per developer for the first year and \$800 per developer for successive years offers the most affordable way for major companies to use the data concentrated in the enterprise mainframe anywhere it is needed via web browser.

This server side version of the Aton Connect communication component is targeted at developers who want to deliver web pages with real time mainframe data, but without complex middleware or complicated mainframe programming. It allows them to develop solutions with scalable performance using skills they already have with Microsoft .NET languages C# and VB.NET.

Rapid access to knowledgeable technical support from Aton is available by email or telephone so that getting a working result - especially important for a pilot or demonstration project - is fast and easy. Developers can confidently tackle projects to address changing business requirements knowing that knowledgeable support is available even during the free 90 day trial period.

"With the Aton Connect Host Integration Toolkit, we are providing one of the easiest ways to integrate the IBM System z with Microsoft Windows servers, desktops, notebooks, Tablet PCs and mobile devices using familiar Microsoft tools. We're so confident in the ability of this product to successfully deliver a result that we provide full support by email and phone during the trial period," said Charles Wilde, CTO of Aton International, Inc. Developers interested in testing the Toolkit should contact Wilde by email at info [at (@)] aton.com or by phone at 1-800-833-0835 from the US and Canada.

Aton International, Inc. has been assisting organizations for the over 25 years to merge

devices and systems for reliable data delivery. The company offers products and services designed to meet the mobile device integration, data access and mobile/embedded software and firmware needs of original equipment manufacturers, systems integrators and enterprise IT professionals. Aton International, Inc. is a Microsoft Gold Certified Partner based in Northern California.
