Constance Kobylarz, CEO
Charles Wilde, CTO & Founder

Deliver Successful Mobile & Embedded Solutions Faster

Aton International, Inc. enables companies to add mobile and wireless devices and other leading edge technologies, such as biometric imaging, physical access control, and GPS to their solutions. Our company specializes in Microsoft Windows Mobile and Embedded systems. Whether you need device drivers, a board support package or mobile/embedded application development, we can help you achieve success.

Knowledgeable Help with Firmware, Applications, and Integration

We provide consulting and services to companies of all sizes—OEMs, ISVs and SI/VARs to develop mobile/ remote products and solutions that add to revenue, reduce costs, and increase customer satisfaction. Our staff can assist with planning, new system architecture design/review, or troubleshooting a problem with an existing project or application. Small projects are welcome. All work is done in the US to help protect your IP.

Our staff can help you deliver your solution on Windows Mobile, Windows CE, XP Embedded and XP Notebooks or Tablet PC products. One device or large networked systems. Even a combination of devices with one code base to reduce development time and headaches. Aton has been a member of the Microsoft Embedded Partner Program since 2001 and has been developing for embedded and networked systems for over 20 years.

Windows Mobile applications are a core competency for our team. We develop and market a set of software applications to get data from enterprise servers out to mobile devices via smart clients and ASP.NET. Our products connect Tablet PC, Pocket PC and Smart Phones to enterprise servers and legacy mainframe systems to give workers cost effective applications that provide real time information at the location it is needed. Our developers will apply their skills to give you an outstanding result for your application.

Here's a comment from one of our satisfied customers: "Thank you for the completion of the Exacta-Mix™ 2400 Operating System work for Baxa Corporation. We found working with Aton a professional and rewarding experience. The technical work performed was of superior quality and within time expectations. Although we encountered some technical difficulties, the issues surfaced quickly, and were resolved in a timely and satisfactory manner. Baxa appreciates your time and efforts making the contract work successfully." Mark O. Soderberg Director, Product Development, Baxa Corporation

Assisting Customers Since 1981

Established in California in 1981, we shipped our first product, a personal computer operating system, that same year. Our expertise expanded to include client/server networks, from Windows 9x to Windows NT to Windows 2000/XP. Aton entered the Internet arena in 1994 and expanded into Web server applications in 1996. We entered the mobile arena in 2001 and launched our first Pocket PC product in 2002. We became a Microsoft Certified Partner in 2003. We also participate in the Microsoft Embedded Partner Program, HP Developer Program and IBM Business Partner Program. Please contact us for a quote on your project.
